

Homework 23

Each number below is the product of 2 primes. Factor them using the $p - 1$ algorithm. Then use the factorization to determine the range of the values of B which will work for $p - 1$ on the given number.

1. $N = 262063$

2. $N = 9420457$

You may use a computer to assist in the computations.
